FIB update (Thm. 2): evict, refresh face, recompute ancestor guards
Interest name q
Front end one-pass parse, prefix hashes $H(1..m)$
Hot-prefix cache flat index, probed from the longest resident depth
p
Guard test next component of q not in $G(p)$?
pass
Hit: face of p exact LPM (Thm. 1)
fail, or no resident p
Miss: FIB lookup (hash or two-stage)
admit
Admission: frequency sketch (sampled 1/16), CLOCK
candidate prefix
